Ontario Building Code (OBC) 8.7.2.2. – Distribution Pipes within Leaching Bed

- (1) Sentence (2) applies to the design and construction of a leaching bed with distribution pipes used within the leaching bed.
- (2) The header line and distribution pipes within a leaching bed shall be designed and constructed so that they can be detected by,
- magnetic means;
 - means of a 14-gauge TW solid copper light-colored plastic-coated tracer wire;
or
 - other means of subsurface detection*

* When utilizing other means, describe the subsurface detection installed:

- We acknowledge and take full responsibility that the distribution pipes within the leaching bed have been constructed so that they can be detected by the means we indicated above.**
