

Pressure Head Test – Shallow Buried Trench

Ontario Building Code (OBC) Reference 8.7.6.1.(2)

The effluent shall be distributed through a pressurized distribution system having a pressure head of not less than 600mm when measured be most distant point from the pump.

Pressurized distribution system is defined as a leaching bed in which the effluent is distributed using pressurized distribution pipes.

Installer must be a licensed individual in the wastewater industry carrying an active BCIN (Building Code Identification Number). Property owners can **NOT** conduct this test.

- We acknowledge and take full responsibility for the pressure head test as required by the OBC specified above as the installers of this shallow buried system.**
