### Harvest Summary

<b>Total Planned Timber Harvest Area:</b>	<b>8.3 Ha</b>	<b>(From Operating Plan) Potential light thinning in portions another 1.3 Ha of Pr</b>
Estimated Harvest Volumes:		
Species:		GMT
Species:		GMT
Species:		GMT

### Comments / Issues:

While still a thinning (not a shelterwood), tree markers should take into account the developing white pine, white spruce and red, white and bur oak regeneration in the understory and the potential for red maple competition.

Tally trees by species when marking.

Four moose were observed during the prescription site inspection.

## General Forest Condition

Mixed conifer plantation, Pw-Pr-Sw. Stands have had one previous thinning. The quality of Pw is good, Pr and Sw quality are average, many have very small crowns. Stocking is highly variable, ranging from 30-50 M2/ ha depending upon species and past thinning. There are some red maple poles and small logs within the plantation.

Small seedlings of white pine, white spruce, red, white and bur oak, and beech are present in low to moderate numbers on the sand caps. Red maple advanced regeneration is abundant.

### Access (major problems, how much road construction anticipated, AOC crossings)

Concession Road 14.

### Values

Value	Description of Value	Prescription
Drainage Ditches	Shallow (< 1.5 meter depth) Intermittent drains, typically formed field boundaries.	No specific AOC. Avoid marking trees directly adjacent to ditch unless severely declining. All crossings to be rehabilitated after use to ensure free flow of water.
Intermittent Watercourse	Moderate to deep (> 1.5 meter depth) May be intermittent or permanent drains or natural watercourses.	15 Meter AOC from water's edge marked in orange. Reserve width is approximately 5 meters from bank edge. Minimize disturbance in remaining area of AOC by retaining crown closure of >70% and limiting vehicle traffic.

<b>TREATMENT BLOCK PRESCRIPTION</b>	<b>Block</b>	<b>Pw 5 Pr3 Sw1 Mr1</b>
<b>Total Area for Treatment [ha]</b>	8.3 Ha (9.6 Ha)	
<p><b>Description:</b> Mixed conifer plantation, Pw-Pr-Sw. Stands have had one previous thinning. The quality of Pw is good, Pr and Sw quality are average. Stocking is highly variable, ranging from 30-50M2/ ha depending upon species. Crown closure is 80-100%. There are some stems of red maple within the plantation. Rows (access) are generally established although not at the north end.</p> <p>Small seedlings of white pine, red, white and bur oak, and beech are present in low to moderate numbers on the sand caps. Red maple advanced regeneration is abundant throughout. No buckthorn was observed. Ferns are common in lower lying areas.</p>		
<p><b>OBJECTIVES:</b> <b>Selection Thinning.</b> Increase the establishment and development of Pw, Sw, Or, Ow, and Ob regeneration. The release of advanced regeneration should be moderated to avoid the dominance of red maple.</p>

Red pine rows in the north are largely declining and will be the focus for row removal.</li> <li>- Species priority for retention is Pw-Sw-Pr: Crop trees should have at least 20-25% live crown.</li> <li>- Maintain AGS hardwoods (not Ag), to enhance diversity and for seed source, remove UGS hardwoods occurring within plantation.</li> <li>- Avoid marking individual stems for removal in the middle of pockets of desired regeneration</li> <li>- Where desired regeneration is developing in adjacent hardwood pockets, thin conifers along the edge to release the regeneration.</li> </ul>
